

How to make a bark chipping area

Shopping List

- 1 eglu and chickens
- 300 litres of bark chippings: available from any good garden center. Choose a chunky type as the smaller varieties can turn a bit mulchy
- 24ft of edging for a 3 sided area like ours or 36ft for a 4 sided area, which is shown in the diagram below.

Layout (not to scale)

Instructions

- Put your eglu in your chosen location
- Lay the edging out around the eglu. Note: Make sure you leave enough room to open the run door and the dropping tray
- Move the eglu away and fix the edging in place
- Pour the bark chippings into the edged area. Now rake it out ensuring all the ground is covered to a depth of around 5cm and 2 inches. Make sure the bark is nice and flat allowing the eglu and netting to sit snugly against the ground.
- Put your eglu and run in place and let your chickens give you a well deserved pat on the back!
